General Information

Title
Postgraduate Master's Programme (First-level): ADVANCED IN IMPLANT PROSTHODONTIC TREATMENTS
Educational Objectives
The aim of the Master's Programme is to enhance participants' knowledge of occlusion, adhesive dentistry and digital dentistry as applied to prosthodontics. The programme is designed to train specialists in Prosthodontics in accordance with European standards (European Prosthodontic Association), enabling them to obtain the title of European Prosthodontic Specialist. It also aims to train potential opinion leaders in Prosthodontics by providing an in-depth review of the existing scientific literature and teaching them how to document the fundamental concepts of prosthetic dentistry from both a clinical and a scientific perspective. Participants will be brought into contact with leading Italian dental technicians in order to acquire the knowledge needed to manage relations with the dental laboratory, communicate effectively with patients and dental technicians, and understand the procedures used to fabricate fixed and removable prostheses on both natural teeth and implants.
