General Information

Title
Postgraduate Master's Programme (Second-level): AESTHETIC MEDICINE
Educational Objectives
The aim of this Postgraduate Master's Programme is to provide graduates in Medicine and Surgery who are licensed to practise medicine with a framework of theoretical and practical knowledge that is currently useful for professional practice in the field of Aesthetic Medicine. Over the last decade, Aesthetic Medicine has become widespread among the general population, although, to date, there are no officially recognised specialist professionals in this field. Aesthetic Medicine lies at the interface with other branches of medicine and often concerns individuals who do not suffer from actual diseases. The Programme aims to provide both basic and advanced knowledge for patient selection, the acquisition of diagnostic and treatment methods, and the identification and prevention of potential complications.
